

Mile-High RETAC

Stop the Bleed and

Chest Compression CPR Cache Program

March 22, 2018

Overview:

There were three grants from within the MHRETAC that were submitted for the NCR HPP Grant Program which were later combined into one and approved. The allocated amount was \$60,000 to purchase equipment for stop the bleed and chest compression training for our communities along with training for healthcare providers. The former three grants were submitted by Chris Milliard from St. Anthony North Health Campus, Ellen Duran from North Suburban Medical Center and Shirley Terry from Mile-High RETAC.

Goal:

The goal of the program is to provide community education for stop the bleed and chest compression CPR which includes a train the trainer course for healthcare providers and caches of training tools for community educators to provide community and classroom education. Community and public education can be provided either in a classroom setting or social events such as Operation Free Bird, Thornton Fest, Air Life Memorial Run, schools, churches or businesses.

Supply Process:

Complete the MHRETAC Request for Equipment and send to Shirley Terry at shirleyterry@comcast.net She will forward your request to the proper north or south location. You will need to make arrangements with either Dave Baldwin or Jason Butts to pick up the equipment. Bring the MHRETAC Equipment Loan Agreement with you. Make sure it is signed by two people from your agency, you and your supervisor to assure tracking of the equipment. You can make arrangements for the return of the

equipment at that time. Long-term loans are appropriate if you are using the equipment on a regular basis. Equipment must be returned in good condition.

All the forms will be posted on the MHRETAC website.

Event Reports:

Event Reports are needed to track how many trainings have occurred in the MHRETAC and how many citizens have been trained. Please send those reports to Shirley Terry within one week of the event.

Training Materials:

Training materials on stop the bleed and chest compression CPR will be posted on the MHRETAC.

Public Access Kits:

There will be some stop the bleed public access kits available for distribution. These kits will be distributed to identified and appropriate entities. These kits will be distributed along with the AED's that are provided to the community. Entities will include community centers, schools, churches and large community venues. Kits for distribution will be approved by the MHRETAC Community Wellness & Injury Prevention Committee.

Caches and Locations:

There are 22 caches within the MHRETAC for use by EMS, fire and hospitals to use while providing community education. Education may be provided through a variety of venues.

The caches are located north at Adams County Fire Rescue and south at Castle Rock Fire and Rescue.
